FOXCONN CURRENT OPEN POSITIONS

Supplier Quality Engineer	The Product Quality Engineer is a professional who specializes in evaluating and refining manufacturing workflows to ensure products meet quality standards and performance set by the customer. This includes a focus on root cause analysis and optimization of overall production quality.
Security Specialist 1st Shift & 2nd Shift	The Security Specialist helps maintain a safe and secure environment by conducting security audits and vulnerability assessments, supporting security technology controls, performing physical checks and patrols, assisting with incident response and investigations, and ensuring compliance with company security policies and procedures.
Product Quality Engineer	The Product Quality Engineer is a professional who specializes in evaluating and refining manufacturing workflows to ensure products meet quality standards and performance set by the customer. This includes a focus on root cause analysis and optimization of overall production quality
Test Engineer	The Test Ensures that the quality and performance of products meet design requirements and user expectations. Through systematic testing processes, identify product defects, verify functional reliability, and assist in optimizing product design, resolve technical challenges, optimize production process, improve test efficiency.
FAE Engineer	The FAE Engineer analyzes product failures, find out the causes of failures, and propose improvement measures, so as to improve product quality and reliability and reduce costs.
EMD Assets Management Engineer	The Assets Management Engineer Manages the full lifecycle of company assets, including equipment/fixture procurement, customs clearance/importation, and ongoing asset tracking. This role ensures cost-effective sourcing, compliance with import regulations, and optimal utilization of physical assets.
BOM Engineer	The BOM Engineer is Responsible for managing and maintaining the product BOMs, ensuring the accuracy and consistency of product design, manufacturing, and supply chain management. This position plays a critical role in the product development and production process, ensuring that all relevant parties can timely

	obtain accurate material information, thereby improving production efficiency and product quality.
AME Engineer	The AME Engineer leads the introduction (NPI), debugging, and sustaining of complex automated manufacturing system. You will be responsible for the electrical and software stability of production equipment, including Robotics, PLCs, AOI system, and AGVs. You will not only directly troubleshoot controls issue, but also introduce latest technology to minimize downtime and optimize cycle time.
L1 Technician (Maintenance & Support)	The L1 Technician (Maintenance & Support) performs standard equipment checks, routine maintenance, and basic troubleshooting. The primary responsibility is to ensure operational efficiency by handling simple mechanical and electrical issues, performing preventive maintenance, and supporting production line stability.
L2 Skilled Technician/Engineer	The L2 Skilled Technician/Engineer ensures the high availability, reliability, and precision of automated manufacturing equipment; acts as the primary responder for complex technical issues, performing in-depth fault analysis, calibrations, and system optimizations; understand and support all L1 activities as a fundamental part of your role, serving as a mentor and escalation point for L1 technicians.
MFG Line Lead	The MFG Line Lead leads daily activities for an assigned production area by coordinating associates, maintaining production flow, and ensuring materials, training, and resources are available. Support production by working on the line as needed to prevent downtime.
CCTV Specialist 1st & 2nd Shift	The CCTV Specialist 1st & 2nd Shift monitors and maintains CCTV systems to support facility security and operations. The CCTV Specialist monitors live camera feeds, coordinates communication for security patrols, reviews and exports recorded footage when authorized, assists with incident documentation, conducts system checks, and supports security, access control, and loss prevention teams with video evidence and system access.

Access Control Specialist	The Access Control Specialist supports all aspects of access controls systems, credentialing, and badging administration for employees, contractors, visitors, and authorized personnel. This role supports secure site operations by maintaining badge and biometric records, administering access permissions, troubleshooting access-control issues, auditing badge usage and access rights, and supporting investigations involving access records.
Industrial Safety Specialist	The Industrial Safety Specialist ensures a safe and compliant industrial environment by preventing accidents, protecting employees and assets, and maintaining adherence to safety regulations. This role involves managing safety programs, conducting risk assessments, and driving continuous improvement in safety practices to foster a culture of safety and operational excellence.
PE Engineer	The PE Engineer manages and maintains the product BOMs, ensuring the accuracy and consistency of product design, manufacturing, and supply chain management. This position plays a critical role in the product development and production process, ensuring that all relevant parties can timely obtain accurate material information, thereby improving production efficiency and product quality.
Material Planner	The Material Planner - CTB management, raw material inventory control, aging stock / E&O disposal
Manufacturing Technician	The Manufacturing Technician focuses on supporting, operating, and maintaining the Surface Mount Technology (SMT) production line. We are committed to providing comprehensive training on all SMT processes and equipment. The ideal candidate is detail-oriented, technically inclined, and dedicated to maintaining the highest quality and safety standards.
SMT Equipment Maintenance Engineer	The SMT Equipment Maintenance Engineer ensures the efficient operation of SMT production line equipment. You will lead preventive maintenance, rapid troubleshooting, process optimization, and technological upgrades to support the demands of high-precision electronic manufacturing.
